AUTOMATION & INTEGRATION

Automate

Connect your existing systems and put AI agents to work — safely, with a human in the loop where it matters.

THE PROBLEM

Your systems already hold the data and do the work — they just don't talk to each other, and the manual glue between them costs hours and introduces errors. Most "AI automation" stops at a demo that can't be trusted in production.

WHAT YOU GET

- **Integration plan** — every system mapped and classified source / sink / bidirectional, with a phased rollout.
- **Architecture diagram** — systems → agent → destinations, in plain view.
- **Working BVEG Connectors + agent(s)** — one connector per system, one agent per workflow.
- **Human-approval gates** — irreversible actions never run unattended.
- **Managed notifications & email** — alerts, approvals, and digests over verified-domain HTTPS. We own the plumbing; you get the messages.
- A tracked project with every asset and task in your Blackvault tracker.

HOW IT WORKS — PHASED

1. **Notify** — the agent reads, summarizes, and alerts a human.
2. **Assist** — the agent drafts the action; a human approves.
3. **Act** — the agent executes reversible, low-blast-radius actions autonomously, logging everything.

GUARDRAILS

No secrets in prompts or logs. Every action logged, idempotent where possible, and gated by human approval for anything irreversible.

DELIVERED & MANAGED

Ships as a website, BVEG Connector, or app behind your Cloudflare edge. We implement and operate the whole stack — your team works from outcomes, not configuration.

WHO IT'S FOR

Operations, support, and engineering teams running multiple systems who want them to work together — without handing the keys to a black box.

INDICATIVE INVESTMENT

$7,500	from $35,000	$4,500/mo
Assessment (credited)	Engagement (build)	Run (operate & tune)

Indicative estimate — final pricing set per scope.
