THE OPERATIONS SUITE

Automate · Monitor · Optimize

One program across the whole arc of your operations — one accountable team, no handoff gaps.

WHY A SUITE, NOT THREE PROJECTS

The three reinforce each other: **Automate** builds the integrated systems and agents; **Monitor** watches them and surfaces what matters; **Optimize** turns the operating data into a defensible cost and lifecycle picture. Bought together they share one discovery, one architecture, and one team — so security, data, and accountability are designed in once, not bolted on three times.

HOW THE PROGRAM RUNS

1. **Single discovery** — systems, telemetry, and cost data assessed together.
2. **Automate** — BVEG Connectors + agents, phased, with approval gates.
3. **Monitor** — health scoring and prioritized alerting across the fleet.
4. **Optimize** — cost & lifecycle dashboard, KPIs, optimization backlog.
5. **Operate** — one unified monthly retainer keeps all three running and reported.

WHAT YOU GET

Everything from the three services — integration plan & agents, health monitoring & alerts, cost & lifecycle dashboard — delivered as **one tracked program** with a single roadmap, a shared architecture, and one monthly report that ties automation, health, and cost together.

WHO IT'S FOR

Organizations that want their operations to *hold* — automated where it's safe, monitored where it matters, accountable on cost — from one firm that stays with it end to end.

INDICATIVE INVESTMENT — BUNDLED ~15% OFF À LA CARTE

~$10,000	~$94,000	~$10,500/mo
Single discovery	All three builds	Unified Operate retainer

Indicative estimate (à la carte ≈ $110k + $12.5k/mo) — final pricing set per scope.

> *One firm across the whole arc, so nothing falls through the handoffs.*
